

The SPN5M ST controller is an ECU (Electronic Control Unit) which can handle up to 16 inputs, and up to 16 outputs with an M7 high-performance microprocessor.

It is freely programmable using the ALMEClab development platform and implemented in a serial line (RS232) or a CAN network as MASTER or SLAVE unit.

For the prepared version, the device is compatible with installation on the ISOBUS network.

The polyurethane resin case makes the controllers suitable for use on machines that operate in harsh work environments.

- NOTES:
- «FREQ» means «frequency» - «LS» MEANS «LOW SIDE»
 - For digital low side outputs : **low side can't be used if the relative input is used**
 - (*) : pin shared with different functions, see the pin configuration based on hardware configuration table
 - Sensor power pins have the reference power supply voltage, MAX 200mA
 - GND pins are connected together

TERMINAL WIRE SIZE: follow the manufacturer's mating connector specification
